

PROJECTOR, which contributes to expense reduction.

**It is being effectively used
at a major automobile manufacturing company.**

The use of presentation software is banned at a major automobile manufacturing company ??

The use of presentation software is banned at a major automobile manufacturing company ? While higher efficiency in business is required more than ever, the use of presentation software is voluntarily restrained based on the instruction by the top management of a major automobile manufacturing company. The purpose of this instruction is to reduce cost, and the reasons for such voluntary restraint are; 1. waste of expense, 2. waste of resource, 3. waste of time for preparation, and 4. waste of time for people to read.

The waste of expense and resource are listed based on the concern for the increase of copy paper and printer toner used as a result of increased material to be prepared. The waste of time is listed aiming at higher efficiency of labor hours.

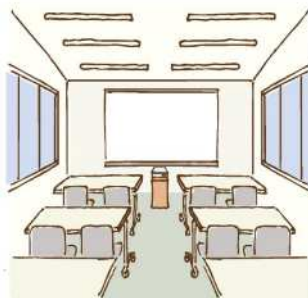

The management is asking
to minimize the time
to prepare presentation material!

1 Saving of time required for preparation
of presentation material!

2 Reduction of material
to be distributed at meetings!

**At this automobile manufacturing company,
Intelligent Projector, iP series from Avio, is being effectively
and conveniently used!**

Effectively used at manufacturing companies, training institutes and schools
